

AbstractTelevision Programme Guide

The invention relates to a television or electronic programme guide (EPG) of the type which is displayed on the screen of a television set to indicate channels, and programmes, which are available for viewing over a time period indicated by a time bar (4). In accordance with the invention the length of the programme is indicated by a cell in a displayed grid (2) and, if the programme has started or will finish prior to or after the time period displayed, a display is generated which indicates to the viewer the time which has lapsed since the programme started or the time remaining of the programme.
